

Howie Wang

Product-minded technologist — I turn business needs into shipped, running products.

Canberra, ACT · howiewang122@gmail.com · how1ewang.github.io · github.com/how1ewang · English · Mandarin

PROFILE

For the past year I have been the single point of contact between a biotech company's owner and the platform that runs the business — discovering what was needed, scoping it into products, designing the experience for three user groups, building and integrating the system, launching it on the WeChat platform and operating it through 50 releases. I understand how a business actually works and how software actually gets built, and I am most useful where those two meet. I am now looking for product, solutions or business-analysis roles where that combination matters more than writing code all day.

WHAT I BRING

Discovery & requirements	Translated an owner's goals into 17 scoped product areas — storefront, loyalty programme, dealer network, commission scheme, anti-counterfeit verification, marketing-asset distribution, training content, finance reporting — and ran structured feedback rounds with the client that fed prioritised releases
Delivery & iteration	50 Mini Program releases in six months; launch-readiness checklists; a production data migration planned with zero downtime because dealers use the system during business hours
Systems & integration literacy	Evaluated and integrated 11 partners — WeChat Pay, Alipay, AdaPay, WeChat Login & Order Centre, WeCom, Aliyun SMS / OSS / MTS, Hupun ERP — and can read, write and review code when a conversation needs it
Data & reporting	Finance reconciliation and downloadable reports for the accountant; member and customer exports; a map dashboard with country → province → city → district drill-down
Documentation & enablement	16 operational documents (deployment, security, environments, launch) plus an illustrated operations guide that lets non-technical staff run the platform without a developer
Compliance & platform administration	WeChat platform requirements (real-name verification, phone-login compliance), Mini Program entity-change filing, pre-packaged food seller registration paperwork, domain / HTTPS / CDN set-up
Communication	Bilingual English / Mandarin; worked remotely from Australia with a China-based client and its vendors; wrote for owners, staff, accountants and engineers

EXPERIENCE

YuanQiPai (元气湃) — Product owner & sole builder, integrated commerce platform

Oct 2025 – Present · Contract | Biotech company selling health products through a dealer network and directly to consumers on WeChat

- **The problem.** The business ran on disconnected tools: no single view of members, dealers, orders or commissions, and every marketing change needed outside help.
- **The scope I defined.** One platform, four products — a WeChat Mini Program storefront (58 screens), a staff console (42 screens), the API behind them and a stand-alone customer registration tool — covering membership tiers, coupons, points wallet, dealer ordering and inventory, commission settlement, anti-counterfeit verification, marketing assets, training content, complaints and finance reporting.
- **Delivery.** Shipped 1.0 and 49 further releases; collected client feedback in structured rounds and turned it into prioritised fixes; wrote the launch checklist and ran the production launch.
- **Decisions that mattered.**
 - Built a drag-and-drop page builder so the marketing team changes campaigns without a developer.
 - Made commission rules (reward base, payout timing, who pays level-difference awards) configurable so the business can change its incentives itself.

- Migrated production data with zero downtime using a dual-track approach rather than a maintenance window.
- Automated refunds for payments that arrive after an order is cancelled, removing a manual reconciliation task and a class of support tickets.
- **Outcome.** In production with 800+ members on the platform; the client's staff make day-to-day changes themselves using the guide I wrote.

Customer Registration System — Product owner & sole builder

May – Jul 2026 · Contract | Stand-alone tool replacing paper customer forms for offline sales across 20 countries

- Designed a mobile form staff can hand to a customer: country-aware fields, a 3,423-district address selector, ID photo capture and a product-feedback survey.
- Gave the owner a live dashboard — a China map with three-level drill-down, time filters, search and CSV export — instead of a spreadsheet.
- Designed the sync to the main platform so the same customer is never duplicated across two systems: match on ID document, then phone; unmatched records are claimed automatically when the customer first logs in.

TECHNICAL FOUNDATION

Node.js · Express · PostgreSQL · SQLite · WeChat Mini Program · HTML / CSS / JavaScript · REST APIs · Payments (WeChat Pay v3, Alipay, AdaPay) · Alibaba Cloud (ECS, OSS, SMS, MTS) · Docker · Nginx · GitHub Actions · Jest (300+ automated tests)

EDUCATION

University of New South Wales (UNSW) — *[degree and graduation year to be added]*

Referees available on request.
